

EDUCATION

University of Toronto

Toronto, Canada

Doctor of Philosophy (PhD), Aerospace Science and Engineering

2018 – 2024

Thesis: Provably stable discontinuous spectral-element methods with the summation-by-parts property: Unified matrix analysis and efficient tensor-product formulations on curved simplices

Advisor: David Zingg

Carleton University

Ottawa, Canada

Bachelor of Engineering (BEng), Mechanical Engineering

2014 – 2018

Capstone project: Performance analysis and numerical optimization of a supercritical carbon dioxide Brayton cycle

RESEARCH INTERESTS

Structure-preserving numerical methods for nonlinear partial differential equations; efficient algorithms for high-performance scientific computing; simulation software development; scientific and engineering applications including aerodynamics, plasma physics, and earth system modelling (i.e., atmospheric, hydrologic, and ocean simulations)

PUBLICATIONS IN PEER-REVIEWED JOURNALS

T. Montoya, A. M. Rueda-Ramírez, and G. J. Gassner, [Entropy-stable discontinuous spectral-element methods for the spherical shallow water equations in covariant form](#). *Journal of Computational Physics* 555, article no. 114782, 2026.

T. Montoya and D. W. Zingg, [Efficient entropy-stable discontinuous spectral-element methods using tensor-product summation-by-parts operators on triangles and tetrahedra](#). *Journal of Computational Physics* 516, article no. 113360, 2024.

T. Montoya and D. W. Zingg, [Efficient tensor-product spectral-element operators with the summation-by-parts property on curved triangles and tetrahedra](#). *SIAM Journal on Scientific Computing* 46(4), pp. A2270–A2297, 2024.

T. Montoya and D. W. Zingg, [A unifying algebraic framework for discontinuous Galerkin and flux reconstruction methods based on the summation-by-parts property](#). *Journal of Scientific Computing* 92(3), article no. 87, 2022.

PUBLICATIONS IN CONFERENCE PROCEEDINGS

T. Montoya and D. W. Zingg, [Stable and conservative high-order methods on triangular elements using tensor-product summation-by-parts operators](#). *11th International Conference on Computational Fluid Dynamics*, Maui, United States, July 2022. **Awarded best student paper.**

CONFERENCE PRESENTATIONS (EXCLUDING ABOVE PROCEEDINGS)

Entropy-stable discontinuous Galerkin methods for the spherical shallow water equations in flux form. *International Conference on Spectral and High-Order Methods*, Montréal, Canada, July 2025.

Entropy-stable discontinuous spectral-element methods for the shallow water equations on the sphere. *Southern Ontario Numerical Analysis Day*, Hamilton, Canada, May 2025.

Efficient entropy-stable discontinuous spectral-element methods in collapsed coordinates for hyperbolic systems on curved triangular and tetrahedral meshes. *Canadian Applied and Industrial Mathematics Society Annual Meeting*, Kingston, Canada, June 2024.

Efficient entropy-stable tensor-product spectral-element methods on simplices. *9th European Congress on Computational Methods in Applied Sciences and Engineering*, Lisbon, Portugal, June 2024.

Efficient tensor-product spectral-element methods with the summation-by-parts property on triangles and tetrahedra. *SIAM Conference on Computational Science and Engineering*, Amsterdam, Netherlands, February 2023.

Unified analysis of discontinuous Galerkin and flux reconstruction methods based on the summation-by-parts property. *International Conference on Spectral and High-Order Methods* (online), July 2021.

Unified analysis of high-order methods based on the summation-by-parts property: Application to discontinuous Galerkin and flux reconstruction discretizations. *SIAM Conference on Computational Science and Engineering* (online), March 2021.

INVITED TALKS (SELECTED)

- Extending Trixi.jl to PDEs on manifolds.** *Trixi User and Developer Interaction (TRUDI)*, Cologne, Germany, March 2026.
- Split-form and entropy-stable high-order methods for hyperbolic systems on curved unstructured meshes and manifolds.** *University of Ottawa Applied Mathematics Seminar*, Ottawa, Canada, November 2025.
- Robust split-form and entropy-stable high-order methods for next-generation atmospheric dynamics.** Canadian Meteorological Centre, Environment and Climate Change Canada, Dorval, Canada, August 2025.
- An entropy-stable discontinuous spectral-element method for the spherical shallow water equations in covariant form.** *University of Waterloo Numerical Analysis and Scientific Computing Seminar*, Waterloo, Canada, February 2025.
- Provably stable tensor-product discontinuous spectral-element methods on triangular and tetrahedral unstructured grids.** Ansys, Inc. (online), July 2024.
- Entropy-stable tensor-product discontinuous spectral-element methods on curved triangles and tetrahedra.** Rice University (online), March 2024.
- Efficient and robust spectral-element methods on triangles using tensor-product summation-by-parts operators.** *NASA Advanced Modeling and Simulation Seminar Series* (online), October 2022.
- Robust deformation of unstructured grids.** Bombardier Aerospace, Montréal, Canada, August 2016.

PROFESSIONAL EXPERIENCE

- | | |
|--|---|
| University of Saskatchewan
<i>Postdoctoral Fellow, Department of Computer Science</i>
Advisor: Raymond Spiteri | Saskatoon, Canada (remote)
<i>January 2026 – Present</i> |
| Nonlinear Numerics Inc.
<i>President</i>
Specialized research, software development, and consulting services for scientific and engineering simulation; completed an industry contract developing a GPU-accelerated discontinuous Galerkin particle-in-cell solver for plasma simulations | Ottawa, Canada
<i>May 2025 – Present</i> |
| University of Cologne
<i>Research Fellow, Department of Mathematics and Computer Science</i>
Academic research and student mentorship on high-order methods for atmospheric dynamics | Cologne, Germany (remote)
<i>January 2025 – January 2026</i> |
| University of Cologne
<i>Postdoctoral Researcher, Department of Mathematics and Computer Science</i>
Project: Robust structure-preserving discontinuous spectral-element methods for the ICON-DG atmospheric dynamical core
Advisor: Gregor Gassner | Cologne, Germany
<i>January 2024 – January 2025</i> |
| National University of Singapore
<i>Visiting Researcher, Department of Mechanical Engineering</i>
Project: Koopman operator approaches to data-driven stability analysis of numerical methods
Advisor: Gianmarco Mengaldo | Singapore
<i>August 2022</i> |
| University of Toronto
<i>Graduate Researcher, Institute for Aerospace Studies</i>
Project: Provably stable discontinuous spectral-element methods with the summation-by-parts property for conservation laws on general unstructured grids
Advisor: David Zingg | Toronto, Canada
<i>September 2018 – December 2023</i> |
| University of Toronto
<i>Undergraduate Researcher, Institute for Aerospace Studies</i>
Projects: Optimization of finite-difference operators with the summation-by-parts property on non-uniform nodal distributions; comparison of continuation methods for steady aerodynamic flows
Advisor: David Zingg | Toronto, Canada
<i>May 2017 – August 2017</i> |
| McGill University
<i>Undergraduate Researcher, Department of Mechanical Engineering</i>
Project: Robust deformation of unstructured grids using radial basis functions and linear elasticity
Advisor: Siva Nadarajah | Montréal, Canada
<i>May 2016 – August 2016</i> |

Carleton University

Undergraduate Researcher, Department of Mechanical and Aerospace Engineering

Ottawa, Canada

May 2015 – August 2015

Projects: Optimal estimation of uncertain parameters in computer models of welding processes; novel interpolation techniques for stress and strain tensor fields using quaternions**Advisor:** John Goldak**TEACHING EXPERIENCE****HydroLearn**<https://hydrolearn.org/>*Best Practices in High-Performance Computing*

March 2026 – Present

Development of an online course module on best practices for high-performance scientific computing for applications in hydrology as part of an open-source educational platform for hydrologic science and engineering funded by the U.S. National Science Foundation

University of Cologne

Cologne, Germany

Scientific Computing: Introduction to Atmospheric Flow Modelling (14722.0023)

April 2024 – July 2024

Assisted in the development and delivery of a new graduate-level mathematics course on modern numerical methods for atmospheric dynamics; contributed to curriculum design and preparation of lecture notes, and was responsible for the creation and supervision of the final project, in which students implement a discontinuous Galerkin solver for the spherical shallow water equations and assess its effectiveness for a series of standard atmospheric test problems

SUPERVISION OF GRADUATE AND UNDERGRADUATE RESEARCH**Fabian Höck, University of Cologne**

Cologne, Germany

MSc, Mathematics (co-supervised with Gregor Gassner and Benedict Geihe)

April 2024 – April 2025

Project: A discontinuous Galerkin method for moist atmospheric dynamics with rain**Ruilin (Jerry) Bai, University of Toronto**

Toronto, Canada

BASc, Engineering Science (co-supervised with David Zingg)

September 2020 – December 2020

Project: Optimization of summation-by-parts operators for minimal solution error**Yewon Lee, University of Toronto**

Toronto, Canada

BASc, Engineering Science (co-supervised with David Zingg and Masayuki Yano)

May 2019 – August 2019

Project: Comparative evaluation of energy- and entropy-stable discontinuous Galerkin and summation-by-parts methods**AWARDS AND SCHOLARSHIPS**

NSERC Canada Postdoctoral Research Award	2026 – 2028
Best Student Paper, International Conference on Computational Fluid Dynamics	2022
Ontario Graduate Scholarship	2019 – 2020, 2022 – 2023
Kenneth Molson Fellowship	2021 – 2022, 2022 – 2023
Queen Elizabeth II Graduate Scholarship in Science and Technology	2020 – 2021, 2021 – 2022
Douglas Patton Hogg Memorial Award	2021
NSERC Canada Graduate Scholarship - Master's	2018 – 2019
University Medal (highest academic standing of any Carleton engineering graduate)	2018
Canadian Society for Mechanical Engineering Gold Medal	2018
Rajesh Ahluwalia Memorial Scholarship	2017 – 2018
NSERC Undergraduate Student Research Award	2015, 2017
McGill University Summer Undergraduate Research in Engineering Award	2016
Allan Buchanan Undergraduate Scholarship	2015 – 2016
Deans' Honour List, Carleton University	2014 – 2018
Faculty Scholarship, Carleton University	2014 – 2018

OPEN-SOURCE SOFTWARE CONTRIBUTIONS AS PRINCIPAL DEVELOPER**TrixiAtmo.jl**<https://github.com/trixi-framework/TrixiAtmo.jl>Julia package extending the [Trixi.jl numerical framework](#) for conservation laws to enable the solution of atmospheric flow problems using a high-order discontinuous spectral-element dynamical core**StableSpectralElements.jl**<https://github.com/tristanmontoya/StableSpectralElements.jl>

Julia framework for energy-stable and entropy-stable discontinuous spectral-element methods on general element types based on multidimensional and tensor-product formulations; emphasis on dispatched strategies for matrix-based and matrix-free operator evaluation

GHOST: Generalized High-Order Solver Toolbox

<https://github.com/tristanmontoya/GHOST>

Python implementation of discontinuous Galerkin and flux reconstruction schemes in one or two spatial dimensions with various design choices

OTHER SIGNIFICANT OPEN-SOURCE CONTRIBUTIONS

Trixi.jl

<https://github.com/trixi-framework/Trixi.jl>

Significant contributions include capabilities for solving PDEs on manifolds, save/load functionality for general element types, and support for purely parabolic equations

SERVICE

Centre for Computational Science and Engineering

Toronto, Canada

Lab Representative, Computational Aerodynamics

December 2021 – June 2024

Member of the student organizing committee for an interdepartmental group of researchers at the University of Toronto across various disciplines of computational science and engineering; assisted in hosting the [2023 CCSE Symposium](#)

Canadian Science Fair Journal

<https://csfjournal.com/>

Editor, Physics and Mathematics Section

June 2022 – March 2024

Volunteer editor and mentor for an open-access online publication showcasing science projects by children and youth at primary and secondary schools across Canada

Reviewer for Scientific Journals and Conferences

Journal of Parallel and Distributed Computing, Advances in Continuous and Discrete Models, JuliaCon

TECHNICAL SKILLS

Programming languages

Daily: Julia, C/C++, Python, $\text{\LaTeX}$; **Occasional:** Fortran, MATLAB, HTML/CSS

Development tools

Unix shell (Bash/zsh/tcsh scripting), Git, CMake/CTest, GNU Make, Jupyter/Pluto notebooks, VS Code, Vim, agentic workflows (OpenAI Codex, Claude Code), continuous integration/deployment (GitHub Actions)

High-performance computing

Shared-memory parallelism (OpenMP, multithreading), distributed-memory parallelism (MPI), task/actor-based concurrency (CAF), GPU acceleration (CUDA), SIMD/SIMT vectorization, matrix-free algorithms, job scheduling (Slurm)

Computational engineering

Mesh generation (Gmsh, Ansys ICEM CFD), scientific visualization (ParaView with Python scripting), applied computational fluid dynamics (Ansys Fluent, Ansys CFX), thermal and structural finite-element analysis (Ansys Mechanical/APDL), computer-aided design (SolidWorks, OnShape, Creo Parametric, Autodesk Inventor)

OTHER ACTIVITIES

Music (performing guitarist/bassist), cycling, alpine skiing (former ski instructor), non-fiction reading

CITIZENSHIP

Canada, France
